

**Amendments to the Claims**

Please amend claims 1, 16 and 25. The currently pending claims after amendment are listed below.

1. (Currently Amended) A method of providing souvenir images to event site customers, comprising:
  - capturing motion video data during an event, said event being attended by a set of event site customers;
  - automatically generating a plurality of images of different event site locations of a plurality of event site locations within an event site from said motion video, wherein each image of said plurality of images is associated with a respective one of said event site locations, wherein each said event site location is occupied during said event by a respective discrete subset of said set of event site customers, each said subset being different and containing at least one and fewer than all respective event site customers of said set of event site customers, each said event site customer occupying only a single respective event site location of said different event site locations during said event;
  - receiving, in an automated interactive device, an input from a customer specifying a desired event site location from among said plurality of event site locations, said receiving step being performed after said step of capturing motion video data;
  - responsive to said step of receiving a user input, automatically displaying to the customer in said automated interactive device at least one image associated with the desired event site location; and
  - responsive to receiving in said automated interactive device a customer confirmation, automatically providing the at least one image to the customer.

2. (Cancelled)

1 3. (Original) The method of claim 1, wherein the at least one image comprises an electronic  
2 image.

1 4. (Previously Presented) The method of claim 1, wherein the motion video data comprises a  
2 scoreboard display signal.

1 5. (Previously Presented) The method of claim 1, wherein the motion video data comprises a  
2 television broadcast signal.

1 6. (Original) The method of claim 1, wherein the at least one image comprises a video clip.

7 - 8. (Cancelled)

1 9. (Original) The method of claim 1, further comprising receiving money from the customer.

1 10. (Original) The method of claim 1, wherein receiving desired location information from  
2 the customer comprises receiving a seat number from the customer.

11-12. (Cancelled)

1 13. (Previously Presented) The method of claim 1, wherein providing the at least one image  
2 comprises:

3 receiving an electronic mail address from the customer; and

4 transmitting the first image to the electronic mail address.

1 14. (Previously Presented) The method of claim 1, wherein providing the at least one image  
2 comprises:  
3 printing the at least one image.

1 15. (Previously Presented) The method of claim 1, wherein providing the at least one image  
2 comprises:  
3 writing the at least one image onto a signal bearing media.

1 16. (Currently Amended) A system for providing souvenir images, comprising:  
2 a selection input device adapted to receive input specifying a desired location from among  
3 of a plurality of locations within an event site from a customer from a set of event site customers  
4 attending an event;  
5 a camera adapted to capture motion video data during an event for automatically generating  
6 a plurality of images of different locations of said plurality of locations within said event site,  
7 wherein each image of said plurality of images is associated with a respective one of said  
8 locations within said event site, wherein each said location within said event site is occupied  
9 during said event by a respective discrete subset of said set of event site customers attending said  
10 event, each said subset being different and containing at least one and fewer than all respective  
11 event site customers of said set of event site customers, each said customer attending said event  
12 occupying only a single respective one of ~~and~~ said locations within said event site during said  
13 event;  
14 an image database for storing image data from said motion video data;  
15 a processor adapted to automatically correlate the desired location within said event site  
16 received from a customer at said selection input device with at least one image associated with the  
17 desired location within said event site, wherein the desired location is received from the customer  
18 at said selection input device and correlated by said processor with the at least one image after  
19 said camera captures said motion video data; and

20 an image delivery apparatus adapted to automatically provide the at least one image  
21 associated with the desired location to the customer responsive to customer input of a desired  
22 location within said event site to said selection input device.

1 17. (Original) The system of claim 16, wherein the image delivery apparatus comprises a  
2 kiosk.

1 18. (Original) The system of claim 17, wherein the image delivery apparatus comprises a  
2 printer operably connected to the kiosk.

1 19. (Original) The system of claim 17, wherein the image delivery apparatus comprises an  
2 optical disk writer operably connected to the kiosk.

1 20. (Original) The system of claim 16, wherein the selection input device comprises at least  
2 one of a touch sensitive monitor and a keypad.

1 21. (Original) The system of claim 16, wherein the image delivery apparatus comprises a  
2 server computer operably connected to a computer network.

1 22. (Original) The system of claim 16, further comprising a stadium display unit operably  
2 connected to the camera, the stadium display unit adapted to display the at least one image to a  
3 plurality of event site customers.

1 23. (Original) The system of claim 16, wherein the image comprises at least one of: a video  
2 clip, a photograph, a digital photograph, and a digital video clip.

1     24.   (Currently Amended) A system adapted to provide souvenir images to event site  
2     customers, comprising:

3             a camera adapted to capture a plurality of images of different locations within  
4     an event site during an event;

5             a sensor that automatically correlates each image of the plurality of images with a  
6     respective discrete subset of a plurality of subsets of a set of seat locations at said event site, each  
7     said subset being different and containing at least one and fewer than all respective said seat  
8     locations of said set of seat locations at said event site;

9             an automated kiosk for interactive use by a customer after said camera has captured said  
10    plurality of images, comprising:

11            an automated document reader that receives a physical document evidencing an assigned  
12    seat location from a customer, said automated document reader reading data recorded on said  
13    physical document to obtain said assigned seat location, said data being unique to said customer;

14            a display that automatically displays an image in the plurality of images associated with the  
15    assigned seat location responsive to obtaining the assigned seat location using data read by said  
16    document reader;

17            a payment receiver that receives a required payment from the customer; and

18            a printer that automatically prints the image associated with the desired seat location in  
19    response to the payment receiver receiving the required payment.

1       25. (Currently Amended) A computer program product, comprising:

2       (a) a program configured to perform a method of providing souvenir images to event site  
3       customers, the method comprising:

4               1) capturing motion video data during an event, said event being attended by a set of  
5               event site customers;

6               2) automatically generating a plurality of images of different event site locations of a  
7               plurality of event site locations within an event site from said motion video, wherein  
8               each image of said plurality of images is associated with a respective one of said  
9               event site locations, wherein each said event site location is occupied during said  
10              event by a respective discrete subset of said set of event site customers, each said  
11              subset being different and containing at least one and fewer than all respective event  
12              site customers of said set of event site customers, each said event site customer  
13              occupying only a single respective event site location of said different event site  
14              locations during said event;

15              3) receiving, in an automated interactive device, an input from a customer specifying  
16              a desired event site location from among said plurality of event site locations, said  
17              receiving step being performed after said step of capturing motion video data;

18              4) responsive to said step of receiving a user input, automatically displaying to the  
19              customer in said automated interactive device at least one image associated with the  
20              desired event site location; and

21              5) responsive to receiving in said automated interactive device a customer  
22              confirmation, automatically providing the at least one image to the customer; and

23       (b) a recordable signal bearing media bearing the program.

1 26. (Previously Presented) The system of claim 24, wherein said automated kiosk further  
2 comprises an interactive input device coupled to said display, wherein said automated kiosk  
3 displays a subset of said plurality of images, said subset containing multiple images, each image  
4 of said subset being associated with the assigned seat location, and wherein said automated kiosk  
5 receives from said customer using said interactive input device a selection of one of said multiple  
6 images of said subset, said printer automatically printing the selected image responsive to  
7 receiving said selection from said customer.

1 27. (Previously Presented) The system of claim 24, wherein said automated kiosk further  
2 comprises an interactive input device coupled to said display, wherein said automated kiosk  
3 receives from said customer a personalized message using said interactive input device, and  
4 wherein responsive to receiving said personalized message, said kiosk automatically prints said  
5 personalized message with said image associated with the desired seat location.

1 28. (Previously Presented) The method of claim 1,  
2 wherein said step of automatically generating a plurality of images automatically generates,  
3 for each said event site location, a subset of said plurality of images, each subset comprising  
4 multiple said images;  
5 wherein said step of automatically displaying to the customer in said automated interactive  
6 device at least one image comprises automatically displaying to the customer in said automated  
7 interactive device the subset of said plurality of images associated with the desired event site  
8 location;  
9 wherein said method further comprises the step of receiving a customer selection of at least  
10 one image of said subset of said plurality of images associated with the desired event, said  
11 customer selection being received in said automated interactive device, the at least one image  
12 selected by said step of receiving a customer selection being automatically provided to the  
13 customer by said automatically providing step.

1       29.   (Previously Presented) The method of claim 1, further comprising the step of receiving in  
2       said automated interactive device a personalized message from said customer, wherein the step of  
3       automatically providing the at least one image to the customer automatically provides an image  
4       containing said personalized message.
